CELLPHONE OR NOT

Jasiel Aray, Krishna Latin, and Gabriela Toledo

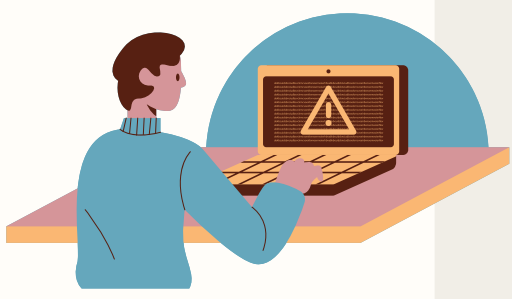

PROS

- *Reduce the anxiety of the students.*
- *Adds educational purposes on an object that's present in their daily lives.*
- *Diversifies teaching activities, which is suitable for any kind of student, including the ones that are in the special needs spectrum.*

CONS

- *Cheating on tests.*
- *It might be the only resource that connects students to the digital world.*
- *Sympthoms of anxiety might get worse for some students.*
- *It can be used for negative purposes (e.g., cyberbullying, sexting).*

Suggestions to UTP

We suggest the implementation of a clear cellphone-use policy rather than a ban. This policy should establish specific moments of usage, depending on the learning objectives and the lesson itself.

Aditionally, joint workshops for students and parents can be organized to foster awareness around appropriate technology usage.

Approach of technology on class

We should not treat technology as completely negative or completely positive. We need to teach our students to use it responsibly, appropiately, and purposefully, while maintaining device-free moments when necessary.

Where do we stand

We believe technology can be extremely useful as a tool in the classroom as long as its use is regulated and students are taught to use it responsibly.

Nowadays, students are digital natives whose everyday lives are closely connected to technology. Therefore, we should adapt to it and use technology to our advantage.

By establishing clear rules and guidelines, teachers can ensure that cellphone use is always purposeful, productive, and connected to the learning objectives.
